

EDUCATION	Department of Mathematics, Hong Kong University of Science and Technology Hong Kong, China <i>Ph.D. in Mathematics</i> 2024–2027 (<i>expected</i>) • Advisor: Qingyuan Jiang • Research area: Derived algebraic geometry and geometric representation theory School of Mathematics and Statistics, Wuhan University Wuhan, China <i>B.S. in Mathematics and Applied Mathematics</i> 2020–2024 • Graduated with honors
RESEARCH INTERESTS	Derived algebraic geometry, derived categories, and geometric representation theory.
RESEARCH PROJECTS	Clifford Relations and Derived Grassmannian Flops <i>joint with Qingyuan Jiang; manuscript in preparation</i> Categorical structures arising from flag correspondences for derived Grassmannians, including a categorical enhancement of Clifford relations in positive rank and spherical and flop relations in rank zero. Linear Koszul Duality <i>ongoing</i> A derived-geometric approach to linear Koszul and Cartier duality and their relation to categorical Fourier duality.
TALKS	Introduction to Hall Algebras HKUST, Fall 2026, MATH 6908A Derived Rings and Affine Stacks HKUST, 12 May 2025 Derived Categories in Algebraic Geometry HKUST, Spring 2025, MATH 6912O Course page Introduction to Derived Algebraic Geometry Wuhan University, 26 December 2024
SEMINARS	Geometric Representation Theory: Reading course, Fall 2026. Algebraic K-Theory: Student seminar, Fall 2024–Spring 2025. – Continuous K-theory in Fall 2024: following Efimov’s paper and the lecture notes <i>Sheaves on Manifolds</i> by Achim Krause, Thomas Nikolaus, and Phil Putzstick. – THH and p-adic methods in Spring 2025: following <i>On Topological Cyclic Homology</i> and <i>Topological Hochschild Homology and Integral p-adic Hodge Theory</i>. Analytic Stacks: Student seminar, Summer 2024. Following lectures by Dustin Clausen and Peter Scholze.
